

SYSTEM AND METHOD FOR DISPLAYING DATA WITH A MOBILE PHONE

Abstract

A system for displaying data with a mobile phone on a display device comprises an image transferring apparatus for connecting to computer and mobile phone, the image transferring apparatus comprising a housing, a receiving module inside the housing for receiving data from the computer, a memory inside the housing for storing data from the computer, a control module for controlling the image transferring apparatus, and an outputting module for outputting data to the mobile phone. It comprises a video transferring apparatus for connecting to the mobile phone and the display device. The video transferring apparatus comprising a receiving module for receiving data from the mobile phone, a control module for controlling the video transferring apparatus, a transferring module for transferring data from the receiving module of the video transferring apparatus into video signals, and an outputting module for outputting video signals transferred by the transferring module to the display device.
